CLUB NOTES

GEOLOGY DAY ! 1996!

Beautiful-Bright-Clear-Sunny-February 18th!

Convening at the new Pioneers Park Nature Center were Jim & Phyllis Parks with a case of Fairburn Agate, James Null with displays of beautifully polished Montana Agates and Del Norte Agates, President Charles Wooldrege with a working tumbler and some literature to assist in answering our visitor's questions. Jerry Moore, Chair of the Day, brought the pot for hot water and cups and cocoa mix which he provides for the participants enjoyment as well as a lot of slabs and other materials for identification. Francis Belohlavy had petrified woods and a binocular microscope to view them with. David and Billie Heffelbower brought a couple buckets of rocks of all kinds and a lovely piece of opal in a globe of water. Roger Pabian demonstrated his 'Free Form Carving' and cases of beautiful finished pieces. Kevin Schwartman set up a case of finished Bolo Ties. Youth member Emerson Wooldridge brought a case of some of his favorites including a nice Ammonite. Our group was complete when Ed Ridge arrived from working all morning with **cases** of all kinds of polished and rough rocks and many reference books. Several club members came to view and visit with people.

Only about 100 persons signed our guest register but many came through other doors and lots of youngsters were intrigued by all they saw. We had show flyers and topographical maps to give out and the park staff was most cooperative. I can't remember what year we started having Geology Day but enjoy it more each time we share in it.
